Version Notes – Version 1.0 dated October 31, 2026

1. **The representation of Padams as five types are explained briefly The way number of Krama vAkyams or statements are generated/derived is explained under both examples.**

1 Veda Basics – Krama Paatam

1.1 Introduction:

Our Rishis and compilers of Veda had devised methods to ensure that the Veda is not changed and there is a control. They have designed ways to ensure it is well memorized and assimilated.

The Krishna Yajur Veda has five types of Vedic learning:

1. Samhita Paatam – learning Vedas as they are recited
2. Pada Paatam – learning Vedas with the Padam of each and every word
3. Krama Paatam – a method to learn Veda in a specific order
4. Jata Paatam – a different method of ordering words back and forth
5. Ghana Paatam – a different method of ordering words and reciting.

The Pada Paatam is twice as powerful and effective in relation to Samhita Paatam; Krama paatam is rated four times and Jata Paatam thousand times as per a sloka referred to by scholars. Ghana Paatam is said to have infinite power and effectiveness in relation in Samhita/Vaakya Paatam.
There are other types of Veda-Paata (not practiced by followers of Krishna Yajur Veda)

1. Maala Paataa
2. Shika Paata
3. Dhanta Paata
4. Dwaja Paata
5. Ratha Paata
6. Rekha Paata

The main purpose of these types of studies is to that the Vedas are protected through distinct ways to repeat the contents of the mantra. Any unintended change in any of the method will conflict with the type of learning. The learning becomes thorough. The Sruti is well protected to be handed over generations through the word of mouth.

We shall concentrate on Krama Paatam in this note and Ghana Paatam in a different note as they are more relevant to followers of Krishan Yajur Veda. Krama Paatam becomes easier when one understands/studies the Pada paatam. We have used the 'term' Word and Padam interchangeably in some places so that beginners understand it easily. Padam is a lowest breakup of Vaakyam as per Pada Paatam Principles (see separate Article on Pada Paatam), whereas a word can have more than one Padam. A Padam which stands alone cannot be taken as a word in terms of Classical Grammar. It may be prefix, suffix, particle, verbal ending etc.

1.2 Padam Types:

1) A padam that is used directly as in SamhitA is called a sAmAnya Padani (**सामान्य पदानि). (**ஸாமான்ய பதா$_3$னி) (**സാമാന്യ പദാനി).** Examples **इषे । त्वा । ऊर्जे ।** இஷே | த்$_3$வா | ஊர்ஜே | **ഇഷേ । ത്വാ । ഊർജേ ।**

2) There are Padams with a split explanation of the constituent words like **ganapatimiti gana-patim**, (the core vAkyam usage is ganapatim as in SamhitA) it indicates that the padam has a split. It is called **Veshtana padani** (in plural) and in English for easy understanding we call it as a Padam Split **(PS)**. Examples **उपा□□ः = उपा□□ इत्युप - आ□□ः । बाहुभ्याम् = बाहुभ्यामिति बाहु - भ्याम्) ।** உபாயவ: = உபாயவ இத்யுப-ஆயவ: | பா$_3$ஹுப்$_4$யாம் = பா$_3$ஹுப்$_4$யாமிதி பா$_3$ஹு - ப்$_4$யாம் | **ഉപായവഃ = ഉപായവ ഇത്യുപ – ആയവഃ । ബാഹുഭ്യാം=ബാഹുഭ്യാമിതി ബാഹു–ഭ്യാം**

3) Padams that represents pre-position is called a upasarga padani (**उपसर्ग पदानि).** It is normally indicated in pada padam as preposition plus iti; examples **एति = (आ+इति) । उपेति = (उप+इति) । प्रेति = (प्र+इति) ।** ஏதி = (ஆ+இதி) | உபேதி = (உப+இதி) | ப்ரேதி = (ப்ர+இதி) | **ஏதி = (ஆ+இதி) । உபேதி = (உப+இதி) ப்ரேதி = (ப்ர+இதி) ।** Let us call them Pre indicating pre-position.

4) Pragraha padani (ग्रह पदानि) are padams that represents dual noun or verb form that is not subject to sandhi at the end. It is represented with a iti in the Pada Paatam. Example ते = (ते इति) । त्वे = (त्वे इति) | चक्षुषी = (चक्षुषी इति) । विष्णो = विष्णो इति | **தே** = (**தே இதி**) | **த்வே** = (**த்வே இதி**) | **சக்ஷுஷீ** = (**சக்ஷுஷீ இதி**) | **விஷ்ணோ** = (**விஷ்ணோ இதி**) | **தே = (தே இதி) । த்வே = (த்வே இதி) । சக்ஷுஷீ = (சக்ஷுஷீ இதி) । விஷ்ணோ = விஷ்ணோ இதி ।** Let us call them **PG** indicating Pragraha.

5) Prahagraha Veshtana padani (**प्रग्रह ◌ेष्टन पदानि)** are padams which are pragraha padani with a split in it with constituent parts; examples **अधिष◌णे = अधिष◌णे इत्यधि - स◌ने । इन्द्राग्नी = इन्द्राग्नी इतीन्द्र – अग्नी |**
அதி$_4$ஷவணே = அதி$_4$ஷவணே இத்யதி$_4$ - ஸவனே | இந்த்$_3$ராக்$_3$னீ = இந்த்$_3$ராக்$_3$னீ இதீந்த்$_3$ர - அக்$_3$னீ |
அധിഷവണേ = അധിഷവണേ ഇത്യധി – സവനേ । ഇന്ദ്രാഗ്നീ = ഇന്ദ്രാഗ്നീ ഇതീന്ദ്ര–അഗ്നീ । Let us call them **PGS** indicating Pragraha with Split.

1.3 <u>Krama Paatam basics:</u>

The rules or principles of Krama Paata recital are as follows:

1. Assume there are seven words/Padams in a mantra as a Ruk.
   We will number these words as 1,2,3,4,5,6,7
2. First recite 1,2 then 2,3 then 3,4 then 4.5, then 5.6, finally 6,7.

3. If the statement 4 is a word with two padams **4a** and **4b as in a PS**, **before taking up 5,6**; it is chanted as **4 iti 4a pause 4b.** The student now grasps the details of the Padams that make this word **4**.
4. If the Padam that is dropped is a Pragraha (PG) or Pragraha Veshtana Padani (PGS), the Padam will be recited distinctly as **4 iti 4** or if it has constituent parts, then as **4 iti 4a pause b.**
5. To indicate that the Ruk has ended a final recital of **7 iti 7.**
6. Then the next Ruk is taken up as in Step 2.
7. All rules relating to normal Veda recital, Swaram rules, Vowel Sandhi Rules, Visarga Sandhi Rules, Consonant Sandhi Rules and other grammar rules are applied.
8. The Swaram markings and acquisition follow the normal Veda recital rules and is clearly marked in the Pada Paatam.

1.4 Elongation of rendering

The rendering needs to be extended/elongated for the **last part of the word/padam,** when it is

1) a Dheerga Swaritam or anudAtta Swaram **and**

the letter is

2a) a Dheerga letter (e.g. aa, ee, O,) **or**

2b) a Anuswaram (letters ending as tam, sam, sham etc. with a dot in Sanskrit).

This is indicated through a **“>”** (arrow pointing to the right in our books for convenience of readers). Kindly note there are slight differences in the Font size/format of Sanskrit, Malayalam and Tamil texts.

The Method of elongation varies between few schools in actual practice. Please refer to your Guru for further clarifications on rendering if the school of different.

Krama Paatam is normally rendered as two teams. When one team finishes the rendering, the other team starts their recital. It sounds like a wave giving a continuous flow and feel like SamhitA with pause.

1.5 Swaram Acquisition

1. In Krama Paatam, the last aksharam in any of the rendering cannot be a anudAttam (lower swaram) unless the last padam or word is fully marked in anudAttam. It is same as the rule for a Padam.
2. A Dheerga letter marked in Swaritam in Pada Padam acquires Dheerga Swaritam subject to rules.
3. Rules of gm, gg needs to be applied when combining words ending in Anuswaram.
4. Generic Swaram rule is that there is an udAttam letter, the previous letter shall be an anudAttam assigned to a letter in a word, and the next one following the udAttam shall be a Swaritam. This rule applies across two Padams or words. Kindly read our Article 01- Basics of Veda Swaras before reading this Article.
5. Any number of udAttams may be formed through Rule and they donot generally acquire swaram, unless special Swaritams are formed.
6. There are words that do not acquire swaram as per Pada Paatam (like Sam, dyau, yAH) and Vedic grammar rules from Sages, especially Sage pAnini.

   Let us see some patterns in GaNAnAm Thava…

गणानां॑ त्वा, गणप॑ति, क॑विं क॑,वीना–मु॑,प॑मश्र॑

Note:

1. **Letter marked in Green have Swaritam or Dheerga Swaritam. (third letters in a pattern ie letters that follow an udAttam)**
2. **The previous letter is UdAttam (medium note)**
3. **Letter prior to it marked in yellow shall be generally acquire anudAttam (lower note) to support the udAttam.**

This is only one of the major rules. Readers should not construed that it is universally applicable everywhere. The swaram shifts to a previous or next letter if an intented letter, cannot acquire swaram. Similarly, if two successive letters acquire swaritam, one will be dropped, subject to some rules. Sometimes a kampam may be formed with two swaritams following one another with a partial recital of anudAttam between them.

A Discussion note on Swaram acquisition principles have been provided after initial study, in our Article 11 – Basics of Veda- Pada Paatam

This Article covers Swaram rules also.

2 GaNanaamthvaa Example

Let us see the explanation of Krama Paata with well known mantra “GaNanAm thavA Ganapathim” with the respective Pada Paatam.

2.1 Samhita/Vakyam: TS 2.3.14.3

(ओं) । गणानां त्वा गणपतिꣳ हवामहे कविं कवीना–मुपमश्र–वस्तमं ।
ज्येष्ठराजं ब्रह्मणां ब्रह्मणस्पत आनश्शृण्वन्नूतिभिः सीद सादनं ॥

ക3ണാനാന്ത്വാ ക3ണപതിꣳ ഹവാമഹേ കവിങ്കവീനാ-
മുപമശ്രവസ്തമം । ജ്യേഷ്ട2രാജം ബ്ര3ഹ്മണാം
ബ്ര3ഹ്മണസ്പത ആ നഃ ശ്രൃണ്വന്നൂതിഭി4: സീദ3 സാദ3നം ।

ഗണാനാം ത്വാ ഗണപതിꣳ ഹവാമഹേ കവിം കവീനാ–
മുപമശ്രവസ്തമം । ജ്യേഷ്ഠരാജം ബ്രഹ്മണാം ബ്രഹ്മണസ്പത ആ
നഃ ശൃണ്വന്നൂതിഭിഃ സീദ സാദനം ।

2.2 Pada breakup or pada pada order

This is actually broken up into words/Padams (as per defined SamhitA Pada Paatam) as follows in terms of constituent words and a serial number to initially understand the flow of Krama paatam:

The Pada paatam spilts the statements as follows.

गणानाम् **(1)**। त्वा **(2)** । गणपतिमिति गण – पतिम् (गणपतिम्) **(3)**।
हवामहे **(4)** । कविम् **(5)**। कवीनाम् **(6)** ।

उपमश्रवस्तममित्युपमश्रवः-तमम् (**उपमश्र-वस्तमं**) **(7)** ॥

ज्येष्ठराजमिति ज्येष्ठ-राजम् (**ज्येष्ठराजं**) **(1)** । ब्रह्मणाम् **(2)** । ब्रह्मणः **(3)** । पते **(4)**। एति (**आ**) **(5)** । नः **(6)** । शृण्वन्न् **(7)**। ऊतिभिरित्यूति - भिः (**ऊतिभिः**) **(8)** । सीद **(9)** । सादनम् **(10)** ॥

क३णानाम् **(1)**। त्वा **(2)** । क३णप॑तिमिति क३ण -- पतिम् (**क३णप॑तिम्**) **(3) PS** । हवामहे **(4)** । कविम् **(5)** । कवीनाम् **(6)** । उपमश्रवस्तम-मित्युपमश्रवः -- तमम्(**उपमश्रवस्तमम्**) **(7) PS** ॥

ज्येष्ठ२राजमिति ज्येष्ठ२ --राजम् (**ज्येष्ठ२राजम्**) **(1) PS** । ब्रह्मणाम् **(2)** । ब्रह्मणः **(3)** । पते **(4)** । एति (**आ**) **(5)** । नः **(6)**। शृण्वन्न् **(7)** । ऊतिपी४रित्यूति -- पी४: (ऊतिपी४:)**(8)PS** । सीद३ **(9)** । सादे३नम् **(10)** ॥

गणानाम् **(1)** । त्वा**(2)** । गणप॑तिमिति गण - पतिम् (**गणप॑तिम्**) **(3) PS** । हवामहे **(4)** । कविम **(5)**। कवीनाम **(6)** । उपमश्रवस्तममित्युपमश्रवः - तमम् (**उपमश्रवस्तमम्**) **(7) PS** ॥

ജ്യേഷ്ഠരാജമിതി ജ്യേഷ്ഠ –രാജം (ജ്യേഷ്ഠരാജം) (1) PS ।
ബ്രഹ്മണാം (2)। ബ്രഹ്മണഃ (3) । പതേ (4) । ഏതി (ആ) (5) ।
നഃ (6)। ശൃണ്വന്ന് (7)। ഊതിഭിരിത്യൂതി – ഭിഃ
(ഊതിഭിഃ) (8) PS । സീദ (9)। സാദനം (10) ॥

2.3 ***Explanation of the flow of this Kramam:***

Krama Paata	Notes and Explanations
(ओं) गणानां त्वा (ஓம்) க3ணானாந் த்வா (ഓം) ഗണാനാം ത്വാ	**Statement No: 1** OM added as a start (Optional). Words 1,2
त्वा गणपतिं த்வா க3ணபதிம் ത്വാ ഗണപതിം	**Statement No: 2** Words 2,3 Normally words or Padam without any swaram in the Vakyam gets lower swaram (anudAttam) in Pada Padam
गणपतिꣳ हवामहे க3ணபதிꣳ ஹவாமஹே ഗണപതിꣳ ഹവാമഹേ	**Statement No: 3** Words 3/4 'M' becomes ꣳ due to following word with 'ha'

गणपतिमिति गण – पतिं > க3ணபதிமிதி க3ண - பதிம் >> ഗണപതിമിതി ഗണ– പതിം > In Pada Paatam. Padam split (PS), Pragraha (PG) and Pragraha veshtanan padani (PGS) , iti that is added it 'i' sound is udAttam and ti is swaritam	**Statement No: 4** Word 3 is going to be dropped. But it has two padams **Gana + pathim** ; so we are reminded that the word is **3 iti 3A – 3B**. Now wherever the padam is split **(PS)** indicated by --- a pause needs to be given for recital. Since the last part patim ends with a Anuswaram and a lower note, the **'m'** is extended during recital. Note: The **PS** adds one extra statement to the Krama Paatam.
हवामहे कविं ஹவாமஹே கவிம் ഹവാമഹേ കവിം	**Statement No: 5** Now we continue with 4/5 Note 'havAmahE' gets anudAtta swaram since it is unmarked (no swaram) in vaakyam.
कविं कवीनां கவிங் கவீனாம் കവിം കവീനാം	**Statement No: 6** Then 5/6 The 'ka' in kavInam acquires swaritam since the ka of kavim has designated anudAttam and ving is a udAttam.
कवीनामुपमश्रवस्तमं கவீனாமுபமஶ்ரவஸ்தமம் കവീനാമുപമശ്രവസ്തമം	**Statement No: 7** Then 6/7 'm' of kavInaam with following 'u' becomes mu. 'pa is anudAttam to so upcoming 'Sra' is Swaritam after udAttam 'ma'

उपमश्र/वस्तम/मित्युपमश्रवः – तं > उपमश्रवस्तममित्युपमश्रवः - तमं > उपमश्रवस्तम मित्युपमश्रवः– तमं >	**Statement No: 8** Now the Ruk has ended. So we say 7 iti 7. Seven has two padams which is split and recited Srva: visargam is followed by letter 'ta' so the visargam is replaced with 's'. 'iti' followed by 'u' becomes 'tyu' as per Vowel Sandhi rule. 'tamam' extended with lower note for anuswaram 'mam' **Last Padam here is a PS so it is a PS as well the end padam iti padam of last padam 7.**
ज्येष्ठराजं ब्रह्मणां ஜ்யேஷ்ட2ராஜம் ப்3ரஹ்மணாம் ஜ்யேஷ்ட2ராஜம் ப்3ரஹ்மணாம்	Now start with the new Ruk. **Statement No: 1 (for new Ruk)** Words 1,2 Jam in raajam acquires anudAttam to support the following 'bra' in brahmanaam which is a udAttam so hma gets swaritam.
ज्येष्ठराजमिति ज्येष्ठ – राजं > ஜ்யேஷ்ட2ராஜமிதி ஜ்யேஷ்ட2 - ராஜம் > ஜ்யேஷ்ட2ராஜமிதி ஜ்யேஷ்ட2 – ராஜம் >	**Statement No: 2 (PS)** Word 1 Jyeshtarajam consists of two padam **jeshta** and **raajam**.. Rajam has anuswaram with Swaritam and extended to Dheerga Swaritam.

ब्रह्मणां ब्रह्मणः ப்3ரஹ்மணாம் ப்3ரஹ்மண: ബ്രഹ്മണാം ബ്രഹ്മണഃ	**Statement No: 3** Continue with 2/3
ब्रह्मणस्पते >>> ப்3ரஹ்மணஸ்பதே >> ബ്രഹ്മണസ്പതേ >	**Statement No: 4** Words 3/4 This is BrahmaNa + pate.. The visargam becomes 's' as a rule . 'te' with lower swaram extended since it is dheeram.
पत आ பத ஆ പത ആ	**Statement No: 5** Words 4/5 The **pate** is converted to pata since the sound 'ae' is followed by Vowel 'aa'. It becomes 'a' of ta sound as per Vowel Sandhi rule from te
आ नः ஆ நः ആ നഃ	**Statement No: 6** Words 5/6 'A' is udAttam so next letter naH gets Swaritam
नश्शृण्वन् நः ஶ்ருண்வன் നശ്ശൃണ്വന്	**Statement No: 7** Words6/7 'sh' comes for visargam

शृण्वन्नूतिभिः ஶ்ருண்வன்னூதிபி4: ശൃണ്വന്നൂതിഭിഃ	**Statement No: 8** Words 7/8 'n' and 'U' combines to give 'NU'
ऊतिभिस्सीद ஊதிபி4: ஸீத3 ഊതിഭിസ്സീദ	**Statement No: 9** Words 8/9 's' comes due to visargam
ऊतिभिरित्यूति – भिः ஊதிபி4ரித்யூதி - பி4: ഊതിഭിരിത്യൂതി – ഭിഃ	**Statement No: 10 (PS)** Split as per padam Uti+bhi: UtibhiH iti UtibhiH In the first part the visargam of bhi becomes 'r' to make it bhir as per Visarga Sandhi. Then combining with 'e' sound of ;iti' becomes 'ri' U follows 'ti' and becomes iyuu as per vowel sandhi.
सीद सादनं ஸீத3 ஸாத3னம் സീദ സാദനം	**Statement No: 11** Words 9/10

	**Statement No: 12** End of Ruk. 10 iti 10 'SAdanam' is a single word **with no padam split so it is rendered without any pause**. No separator will be indicated like --. 'na' get anudAttam to support 'ti' which has acquired anudAttam to support 'SA' in sAdanam which is udAttam and da becomes swaritam.

2.4 Number of Statements generated

Controls on Krama/ JatA/Ghana vAkyams generated:

Let us take an example of a statement with 7 Padams. Let's assume it **doesnot have** any Padam with Padam split with iti (like ganapatimiti gaNa – patim, bAhuByAmiti bAhu - byAm) or a Pragraha. (Like, uqtO iti#, athOq iti#).
The number of statements as per various paatams will be as follows:

Type of Study	Combination and number of vAkyams
Pada paatam	**7 padams** repeated in Order 1,2,3,4,5,6,7
krama paatam	(1,2), (2,3), (3,4) (4.5) (5,6) (6,7) and 7 iti 7 **(Total 7 vAkyams/statements)**
Jata paatam (read a separate Article)	Similar combination of **starting two padams** like in krama (1,2), (2,3), (3,4) (4.5) (5,6) (6,7) and 7 iti 7 **(Total 7 jata vAkyams/statements)**

Ghana paatam (read a separate Article)	Similar combination of **starting three padams** (1,2,3), (2,3,4), (3,4,5) (4.5,6) (5,6,7) (6,7) and 7 iti 7 **(Total 7 Ghana vAkyams/statements)**

So, the thumb rule is that when simple padams are there; the vikruti paata generates same number of statements as the number of padams, at a base level.

Let us go to our gananaam tvaa example

Ruk 1 – There are **7 padams** which includes **2 PS** (padam spilt ganapatim and upamasravastamam) so it should generate number of padam plus two PS = 9 statements. The last padam if it were a normal padam, we would have repeated it separately. (see in sadanam iti sadanam). So, if the last padam is a padam with split (PS) or (PG) or (PGS), one statement will be generated less.
Therefore, the formula is number of padams 7 + padam splits (PS) 2 +pragraha padam (PG) 0 + pragraha padam split (PGS) 0 – minus number of last padam which is a PS or PG or PGS 1 = 9-1 = 8 Krama Statements

Ruk 2- There are **10 Padams** and it includes **2 PS,** jeShtarajam and UtiBhiH

Therefore, the formula is number of padams 10 + padam splits (PS) 2 +pragraha padam (PG) 0 + pragraha padam split (PGS) 0 – minus number of last padam which is a PS or PG or PGS 0 = 10+2 = 12 Krama Statements

3 Rudra Kramam example

3.1 Example from Rudra Pada Paatam

The Pada Paatam as represented in earlier days as follows:

We are providing the first mantra from Anuvaham 1 of Rudram. This is taken from the book containing the work of Shri Sayanachaaryaa.

नमः **(1)** । ते **(2)** । रुद्र **(3)** । मन्यवे **(4)** । उतो इति **(5) (PG)** ।

ते **(6)** । इषवे **(7)** । नमः **(8)** ।

नमः **(1)** । ते **(2)** । अस्तु **(3)** । धन्वने **(4)** । बाहुभ्यामिति बाहु – भ्याम्

(बाहुभ्याम्) **(5) PS** । उत **(6)** । ते **(7)** । नमः **(8)** ॥

நம: **(1)** । தே **(2)** । ருத்3ர **(2)** । மன்யவே **(4)** ।

உதோ இதி **(5) (PG)** । தே **(6)** । இஷ்வே **(7)** । நம: **(8)** ।

நம: **(1)** । தே **(2)** । அஸ்து **(3)** । த4ன்வனே **(4)** ।

பா3ஹுப்4யாமிதி பா3ஹு -- ப்4யாம் (பா3ஹுப்4யாம்) **(5)** ।

உத **(6)** । தே **(7)** । நம: **(8)** ॥

നമഃ **(1)** । തേ **(2)** । രുദ്ര **(3)** । മന്യവേ **(4)** । ഉതോ ഇതി **(5) (PG)** ।

തേ **(6)** । ഇഷവേ **(7)** । നമഃ **(8)** ।

നമഃ **(1)** । തേ **(2)**। അസ്തു **(3)** । ധന്വനേ **(4)** ।

ബാഹുഭ്യാമിതി ബാഹു – ഭ്യാം (ബാഹുഭ്യാം) **(5)**।

ഉത **(6)**। തേ **(7)** । നമഃ **(8)** ॥

Now the Pada Padam gives all the padams only. While reciting we need to take care of all Recital rules, Word formation, grammar etc. Let us see how this converts into Kramam. We have indicated the dheerga swaritam in Padam (words). In classical books, it will be indicated as swaritam and during rendering the specific rules are applied and rendered as Dheerga Swaritam.

3.2 Explanation of the Kramam flow:

Notes and Explanations with Padam	Krama Paata Vaakyam
Padam 1,2 नमः + ते । Padam 1,2 நமः । தே Padam 1,2 നമഃ । തേ namaha+te becomes namaste;	(ओं) नमस्ते (ஓம்) நமஸ்தே (ഓം) നമസ്തേ Visargam becomes ‘s’ before ‘ta’ **Statement No: 1**
Padam 2/3, ते । रुद्र Padam 2/3 தே । ருத்3ர Padam 2/3 തേ । രുദ്ര । ‘te’ and ‘rudra’ do not have any swaram in vaakyam and acquires	ते रुद्र தே ருத்3ர തേ രുദ്ര anudAttam(lower swaram). **Statement No: 2**

Padam 3/4; रुद्र । मन्यवे॥ Padam 3/4 ரு॒த்3ர । ம॒ன்யவே॥ Padam 3/4 രു॒ദ്ര । മ॒ന്യവേ॥ । in ManyavE , 'vE' is a dheerga letter with swaram at the end, the acquired Swaritam becomes Dheerga Swaritam	रुद्र मन्यवे॥ > ரு॒த்3ர ம॒ன்யவே॥ > രു॒ദ്ര മ॒ന്യവേ॥ > **Statement No: 3**
Padams 4/5. मन्यवे॥ । उतो ~~इति~~ । Padams 4/5 ம॒ன்யவே॥ । உ॒தோ ~~இதி~~ Padams 4/5 മ॒ന്യവേ॥ । ഉ॒തോ ~~ഇതി~~ ManyavE becomes Manya**va** due to following Vowel 'U' as per vowel sandhi. Padam **iti** is not considered as it is an indicator in Pada Paatam to mean that 'utO' is a **Pragruhya or Pragrahas**. **Pragruhyas** are Padams which are not subject to Sandhi at the end.	मन्यव। उतो ம॒ன்யவ। உ॒தோ മ॒ന്യവ। ഉ॒തോ **Statement No: 4**
Padam 5/6. उतो ~~इति~~ । ते । Padam 5/6 உ॒தோ ~~இதி~~ । தே Padam 5/6 ഉ॒തോ ~~ഇതി~~ । തേ te acquires dheerga swaritam due to being a dheerga letter at the end.	उतो ते॥ > உ॒தோ தே॥ > ഉ॒തോ തേ॥ > **Statement No: 5**

Padam 5 उतो इति उतो Padam 5 உதோ இதி உதோ Padam 5 ഉതോ ഇതി ഉതോ is dropped so **utO iti utO** is taken; 'e' in iti + u in utO combine to give ityu. When a padam is indicated with iti, the padam is a pragruhya (pragraha); the last part of such Padams as not subject to Vowel Sandhi and the first part may be be subject to Sandhi. These Padams normally represent dual noun or verb form ending in 'ee', 'uu' 'O'.	उतो इत्युतो உதோ இத்யுதோ ഉതോ ഇത്യുതോ **Statement No: 6 (PG is repeated with PG iti PG)** This is an additional statement.
Padam 6,7 ते । इषवे Padam 6,7 தே । இஷ்வே Padam 6,7 തേ । ഇഷവേ । 'ta' is actually 'te' that has taken ta sound due to following vowel 'e' in iShave	त इषवे த இஷ்வே ത ഇഷവേ **Statement No: 7**
Padam 7/8 इषवे । नमः Padam 7/8 இஷ்வே । நம: Padam 7/8 ഇഷവേ । നമഃ । 've' in Ishave acquires anudAttam to support the anudattam na and swaritam 'ma' in namaha	इषवे नमः இஷ்வே நம: ഇഷവേ നമഃ **Statement No: 8**

Padam 8 नमः॥ Padam 8 நம: ॥ Padam 8 നമഃ ॥ End of Ruk in Samhita. So Padam 8 iti 8. First namaha loses visargam before 'e',vowel. ma acquires anudAttam to support intended svaritam of 'ti', but ti itself acquires anudAttam to support 'ma' in second namaha with prior udAttam 'na'	नम इति नमः ॥ நம இதி நம: ॥ നമ ഇതി നമഃ ॥ **Statement No: 9**
Start of second ruk. Padam 1,2 नमः । ते Padam 1,2 நம: । தே Padam 1,2 നമഃ । തേ	नमस्ते நமஸ்தே നമസ്തേ **Statement No: 1 (2nd Ruk)**
Padam 2/3 ते । अस्तु Padam 2/3 தே । அஸ்து Padam 2/3 തേ । അസ്തു Both 'te' and 'astu' do not have swaram in Vaakyam. They are rendered with anudAttam fully as marked in Padam. Please note that 'a' of astu does not elide (become avagraha) in Rudram as per a generic rule provided in prAtiSakyam.	ते अस्तु தே அஸ்து തേ അസ്തു **Statement No: 2**

Padam 3/4 - अस्तु । धन्वने Padam 3/4 - அஸ்து । த4ன்வனே Padam 3/4 - അസ്തു । ധന്വനേ	अस्तु धन्वने அஸ்து த4ன்வனே അസ്തു ധന്വനേ **Statement No: 3**
Padam 4/5. धन्वने । बाहुभ्यां Padam 4/5 த4ன்வனே । பா3ஹுப்4யாம் Padam 4/5 ധന്വനേ । ബാഹുഭ്യാം Pada Paatam is given as बाहुभ्यामिति बाहु – भ्याम् Here the 'iti' has been added to split the Padam. iti has svaritam on ti by Pada Paata rules. In Pada paata style, the bAhubhyAm with iti becomes bA`hubhya`miti` , the split is given as bA`hu – bhyA`m. 'bhyAm' acquires anudAttam to support 'ti' in 'iti' if you combine second part bAhu+bhyAM, bA has anudAttam, hu is udAttam so, when bhyAm is combined it acquires svaritam; becomes a dheerga swaritam since it is dheerga letter.(refer to Swaram acquisition rules given above)	धन्वने बाहुभ्यां > த4ன்வனே பா3ஹுப்4யாம் > ധന്വനേ ബാഹുഭ്യാം > **Statement No: 4**

Padam 5/6 बा॒हु॒भ्यां॑ । उ॒त । Padam 5/6 पा॒3ஹு॒ப்4யாம்॑ । உ॒த । Padam 5/6 ബാഹു॒ഭ്യാം॑ । ഉ॒ത । Note : bahubhayAm when ends separately as a Padam will have dheerga swaritam, but with combining of 'm' and 'u' of uta, it has shifted to the middle of the statement; appears before 'mu' and it is no longer a stand-alone long anuswaram. So it becomes a normal swaritam.	बा॒हु॒भ्यामु॒त पा॒3ஹு॒ப்4யாமு॒த ബാഹു॒ഭ്യാമു॒ത **Statement No: 5**
Padam 5 is dropped. Padam 5 iti 5 बा॒हु॒भ्यां॑ Padam 5 iti 5 पा॒3ஹு॒ப்4யாம்॑ Padam 5 iti 5 ബാഹു॒ഭ്യാം॑	बा॒हु॒भ्यामिति॑ बा॒हु॒ – भ्यां॑ > पा॒3ஹு॒ப்4யாமிதி॑ பா॒3ஹு॒ - ப்4யாம்॑ > ബാഹു॒ഭ്യാമിതി॑ ബാഹു॒ – ഭ്യാം॑ > **Statement No: 6 (PS)** **A PS is recited with its split compenents. Additional statement**

Padam 6,7 उत । ते Padam 6,7 உத । தே Padam 6,7 ഉത । തേ	उत ते ॥ > உத தே ॥ > ഉത തേ ॥ > **Statement No: 7**
Padam 7/8 ते । नमः Padam 7/8 தே । நம: । Padam 7/8 തേ । നമഃ	ते नमः தே நம: തേ നമഃ **Statement No: 8**
Ruk ends. नमः Ruk ends நம: । Ruk ends നമഃ । So Padam **8 iti 8**	नम इति नमः ॥ நம இதி நம: ॥ നമ ഇതി നമഃ ॥ **Statement No: 9**

3.3 Number of statements generated

Ruk 1 – There are **8 padams** which includes **1 PG** (Pragraha utO iti) so it should generate number of padam plus one extra statement = 9 statements.
Therefore, the formula is number of padams 9 + padam splits (PS) 0 +pragraha padam (PG) 1 + pragraha padam split (PGS) 0 – minus number of last padam which is a PS or PG or PGS 0 = 8+1 = 9 Krama Statements

Ruk 2- There are **8 Padams** and it includes **1 PS,** (bAhuByAm). **Therefore, the formula is number of padams 8 + padam splits (PS) 1 + pragraha padam (PG) 0 + pragraha padam split (PGS) 0 – minus number of last padam which is a PS or PG or PGS 0 = 8+1 = 9 Krama Statements.**

Readers can understand the flow with our Compilation on TS 4.5 Pada Paatam with Vaakyam which has full Rudra Namakam with Padam and Vaakyam.
